Evgeny Ilin

Senior PHP Backend Developer focused on Symfony, Doctrine, API design, legacy modernization, reliable transactional backend systems, and agentic software engineering.

SUMMARY

Senior PHP Backend Developer with 9+ years of experience building and modernizing backend systems. Strong focus on Symfony, Doctrine, API design, legacy refactoring, SQL optimization, and transactional workflows.

ENGINEERING INITIATIVE · DYNATECH SIA

Agentic Engineering

Pioneered the adoption of agentic software engineering at Dynatech SIA. Independently designed and implemented an end-to-end agentic SDLC framework covering task decomposition, implementation, code review, testing, and delivery. Applied the framework to migrate part of a legacy system from Hack to PHP 8.4, introducing modern engineering standards and practices such as OpenAPI specifications and hexagonal architecture.

Agentic SDLC | AI coding agents | Quality gates | Legacy migration

SALARY

- EUR 4800 – 5500 gross

SKILLS

Core

PHP 8 | Symfony | Doctrine | REST API | OpenAPI | DDD | CQRS | Event Sourcing

Databases

PostgreSQL | MySQL / MariaDB | MongoDB

Infrastructure

Docker | Kubernetes | Redis | RabbitMQ | Git

Legacy & Migration

PHP 5.3 / 7.2 | Phalcon | Laravel | Legacy modernization

EXPERIENCE

Dynatech SIA Riga · Sep 2023 – Present

PHP 8.4, Symfony 7, Doctrine, PostgreSQL, MongoDB, OpenAPI

- Applied an independently designed agentic SDLC framework to migrate part of a legacy system from Hack to PHP 8.4 and introduce OpenAPI specifications and hexagonal architecture.
- Developed automated reconciliation for banking transactions (Crassula), with idempotent, OpenAPI-contracted workflows.
- Built the API for the risk-processing core and implemented scoring cards.
- Developed the back office for a ticketing system.
- Worked on transactional backend flows with queues (Redis, RabbitMQ) and SQL optimization.
- Contributed to backend architecture decisions, refactoring, and production issue analysis.

AGCSOFT SIA Riga · 2022 – Aug 2023

Symfony 5, Phalcon, Phinx, Doctrine, Redis, RabbitMQ, MySQL, MongoDB, Swagger

- Developed the core sports-betting system.
- Migrated legacy PHP services toward a Symfony-based architecture, separating domain logic from legacy infrastructure.

UPDEVISION Remote · Feb 2022 – Mar 2022 SHORT-TERM CONTRACT

Laravel, Doctrine

- Contributed to the my.yougiver.me project.

Bolid R&D Moscow · 2019 – Feb 2022

C++, Qt, Boost, PostgreSQL, MSSQL · Git, CMake, QMake, MSBuild, TeamCity

- Developed the cross-platform enterprise fire-security workstation "Orion X".

LEXPRO Ltd Moscow · 2011 – 2019

PHP, Phalcon, CakePHP, Sphinx, XSLT, HTML5/CSS3 · Composer, npm, Git, Selenium, Jenkins

- Refactored the legacy codebase of a legal search engine and improved search quality.
- Implemented core DevOps practices: containerization and virtualization based on OpenVZ.
- Implemented a microservice architecture.
- Set up services monitoring with Zabbix and CI/CD with Jenkins.
- Automated web-UI testing with Selenium and built the test suite.
- Technical management of the "Telemedicine" project: task planning and monitoring, stakeholder interaction.

SELECTED PROJECTS

TrackMyEnergy LIVE PRODUCT

Purpose Helps users track daily activity time and personal energy capacity.
Role Creator and backend developer.
Stack PHP 8.5, Symfony 7.4 LTS, Doctrine ORM, PostgreSQL, Redis, Docker.
Result Designed, built, and deployed a production web application using DDD bounded contexts and automated quality checks.
Live trackmyenergy.life

Legacy migration

Problem Aging PHP codebases hard to maintain and extend.
Role Backend developer.
Stack PHP, Symfony, Doctrine.
Result Domain logic separated from legacy infrastructure; improved maintainability.

API / OpenAPI contracts

Problem Services needed clear, reliable contracts between backend and consumers.
Role Backend developer.
Stack Symfony, OpenAPI / Swagger, REST.
Result Idempotent, contract-first APIs (risk core, reconciliation).

SQL / backend performance

Problem Transactional workloads with heavy queries and queue processing.
Role Backend developer.
Stack PostgreSQL / MySQL, Redis, RabbitMQ.
Result Optimized queries and queue-driven flows for throughput and reliability.

Reference implementations

- CQRS pattern
- Reconciliation via Event Sourcing
- DDD sample application
- DevOps from scratch: Go clients, k8s, Kafka, Prometheus, Grafana
- Transposition algorithm
